Laboratory Activity No. 10	
The Selection Widgets using Pycharm	
Course Code: CPE103	Program: BSCPE
Course Title: Object-Oriented Programming	Date Performed:
Section: BSCpE 1A	Date Submitted:
Name: Balana, Jerkielle Roen O.	Instructor: Engr. Maria Sayo

1. Objective(s):

This activity aims to familiarize students with the Pycharm framework and selection widget

2. Intended Learning Outcomes (ILOs):

The students should be able to:

- 2.1 To create a Python program that use selection widget like Combobox
- 2.2 To use ttk function as part of Tk () in the Tkinter module

3. Discussion:

A Graphical User Interface (GUI) application is a program that the user can interact with through graphics (windows, buttons, text fields, checkboxes, images, icons, etc..) such as the Desktop GUI of Windows OS by using a mouse and keyboard unlike with a Command-line program or Terminal program that support keyboard inputs only.

Pycharm is an integrated development environment used for programming in Python. It provides code analysis, a graphical debugger, an integrated unit tester, integration with version control systems, and supports web development with Django.

4. Materials and Equipment:

Desktop Computer with Anaconda Python or Pycharm Windows Operating System

5. Procedure:

1.

2. Run the program and observe the output.

Adding an icon

- 3. Download any .ico picture from https://icon-icons.com/ or any similar sites.
- 4. Place the icon in your folder (ex. Oopfa1<lastname>_lab10)

5. Run the program again, the program should now have an icon similar to the program below. × Choose your birth month Select the month of your birth:

6. Supplementary Activity:

Task

- 1. Create label widgets below to label your birth date <dd>, birth year <yyyy>
- 2. Create combobox to drop down your birth date <dd>, birth year <yyyy>
- 3. Create another method to show info about your birth date <dd>, birth year <yyyy>

Note: You may also use additional selection(listbox, radio button, check button) or common widgets to improve the design of your GUI.

Questions

1. What are selection widgets?

Selection widgets are GUI elements in programming, particularly in frameworks like Tkinter (used in Python), that allow users to choose from a predefined set of options. These widgets enable the user to select a value or option from a list, a dropdown, or a set of radio buttons, checkboxes, etc.

2. Which Python libraries provide selection widgets?

Tkinter is the standard GUI library in Python and comes pre-installed with Python. It provides a variety of selection widgets. **PyQt** and **PySide** are Python bindings for the Qt application framework. These libraries provide more advanced and feature-rich selection widgets.

3. How do selection widgets enhance user interaction in GUI applications?

Selection widgets enhance user interaction in GUI applications by providing a way for users to easily and efficiently choose from a set of options. They are an essential part of creating a responsive and user-friendly interface, improving both the functionality and the overall experience of the application.

7. Conclusion:

Selection widgets in Tkinter allow users to make choices within a graphical interface. These widgets are crucial in applications where user input or data selection is required. In these case, Radiobutton allows the user to select a single option from multiple choices.

8. Assessment Rubric:
